

Mitchopolis Legal Automation System

Phase 2 — Full Documentation

Detailed Engineering Summary & Operational Guide

This document provides a full record of Phase 2 development of the Mitchopolis Legal Automation System.

1. Overview of Phase 2

Phase 2 focused on turning the Mitchopolis Evidence Engine from a functional prototype into a court-ready automation system. The key themes of this phase were:

- Court-oriented PDFs (Master Narrative & Timeline PDFs)

- Enhanced Court Bundle v2.1
- Full case folder architecture matching Kelowna BCSC standards
- Automation scripts for case migration and status checks
- Stabilization of the Control + Log terminal workflow
- JSON pipelines for narrative and timeline processing

2. Major Features Completed

- Master Narrative PDF v1.0 — analytical affidavit-style summary
- Timeline PDF v1.0 — exported for court-ready viewing
- Court Bundle v2.1 — narrative text included in CSV + index.md
- New utilities: `narrative_master.py`, `master_narrative_pdf.py`
- New endpoint: `POST /narrative/master/pdf`
- Case migration tool: `manage_case.py` with `migrate/status/open/sync`
- Case folder created: `BCSC_138865_Watson_v_McClean`
- Evidence folder integration (`source_evidence`, `filings`, `notes`, `exports`)
- Stabilized iTerm2 environment for consistent daily workflow

3. Folder Architecture Created

Created and standardized: `~/Mitchopolis/cases/BCSC_138865_Watson_v_McClean/`

- `bundles/`
- `exports/`
- `source_evidence/`
- `notes/`
- `filings/`

This mirrors real BC Supreme Court file structure and organizes all generated materials (PDFs, bundles, evidence, drafts, filings).

4. Case Automation Script (`manage_case.py`)

The `manage_case.py` script enables simple terminal commands:

- `python manage_case.py migrate`
- `python manage_case.py status`
- `python manage_case.py open`
- `python manage_case.py sync`

This replaces manual file handling with consistent, reliable automation.

5. End-to-End Evidence Automation Pipeline

Phase 2 validated the full evidence pipeline:

- 1) Evidence → inbox
- 2) /process → OCR + classification + narrative
- 3) /narrative/master/pdf → Master Narrative PDF
- 4) /bundle → Court Bundle ZIP
- 5) Outputs saved to BCSC case structure

Each step is now stable and repeatable.

6. iTerm2 Development Environment

Phase 2 finalized the two-pane workflow:

- CONTROL Terminal (left): commands, venv, server
- LOG Terminal (right): uvicorn output only

Broadcast mode issues were resolved and profiles were cleaned.

7. Outputs Validated

Successfully generated:

- Court Bundle v2.1 (ZIP)
- Timeline PDF v1.0
- Master Narrative PDF v1.0
- Permanent storage in case folder

Conclusion

Phase 2 is complete. The Mitchopolis Legal Automation System now produces consistent, professional legal outputs and maintains a robust internal folder structure. The system is ready for Phase 3: automation upgrades, affidavit generation, UI development, and multi-case support.
